

Match Game

A nonrenewable energy source, like natural gas, does not get replaced after we use it. So, it's very important that we conserve energy and use less natural gas. We don't want to run out, do we?

When we talk about natural gas, we use all sorts of interesting words. Draw a line from the words listed below to their correct definitions.

Energy

Made from old plants and animals, types of these are coal, oil and natural gas.

Fossil Fuels

This means to use less natural gas, which helps the environment.

Natural Gas

A long, underground tube that carries natural gas.

Conserve

This comes in many different forms, and we use it every day to help get things done.

Pipeline

An energy source that is not replaced; natural gas and coal are examples.

Nonrenewable

Equipment with dials that measures how much natural gas your family uses in your home.

Leak

This fossil fuel, formed 200 million years ago, travels through pipelines to our homes.

Gas Meter

When natural gas leaves a pipe and goes into the air we breathe.
